February 2005

Ecodyne Cooling Opens Office in Santa Rosa, California

Effective January 15, 2005, Ecodyne Cooling expanded its capabilities in the United States by announcing a new sales office will be staffed in Santa Rosa, CA. The office will be managed by Stephen Heidl, Regional Manager, USA. Steve brings to Ecodyne over 30 years of extensive cooling tower experience and will be pleased to assist you in obtaining the proper quality replacement components required to keep your tower, regardless of the original manufacturer, in optimum operating condition.

New Products

Cooling tower owner/operators continue to see the benefit of enhanced product development in our industry. We are pleased to offer the following overview;

Amarillo Gear Introduces Sealed Speed Reducers

Eliminating the need for oil changes, Amarillo Gear has developed a 5 year no maintenance Gear Drive. Benefits include reduced maintenance costs and improved reliability by preventing 2 most common failure modes, low oil level and poor oil quality.

Existing fan drives can be re-configured to sealed units.

Amarillo Gear Introduces New Composite Drive Shafts

To compliment their mechanical equipment line, Amarillo Gear has developed a new carbon composite drive shaft / coupling arrangement specifically for cooling tower service. High strength to weight ratio, corrosion resistance and a patented composite flex disc are a few of the benefits Amarillo Composite Drive Shafts will bring to the market.

Brentwood Industries Offers Mechanically Assembled Film Fill and Drift Eliminators

Cost savings and the elimination of environmental issues are the significant benefits of Brentwood's continuing development of mechanically assembled products. Previously glued, the new technology utilizes a mechanical assembly procedure to bundle fill and drift eliminator sheets into the finished product.

Service and Support of Cooling Towers Worldwide

- New Towers
- Reconstruction
- Thermal Upgrades
- Preventative Maintenance
- Spare Parts
